

Ductless Heat Pumps OTP Series

Ouellet... A source of comfort for over 50 years!

Ouellet Canada is recognized as the undisputed North American leader in the design, manufacture, and distribution of electric heating products.

Located in L'Islet in the province of Quebec, Canada, we know a thing or two about harsh winters. For over 50 years, we've offered high quality products and services that have earned us the trust of customers across Canada.

Your satisfaction is our number one priority.

We certify all our installers in order to ensure you the best possible customer experience—from system installation to aftersales service.

Warranty for your peace of mind

Every Ouellet heat pump system comes with a basic warranty on parts (labour not included).

How a heat pump works

Heat pumps use the principle of thermodynamics to transfer heat from one place to another. In winter they extract heat energy from the outside air and transfer it inside. The same happens in the summer, but in reverse: they extract heat from inside and transfer it outside. Heat pumps are therefore more efficient than traditional electric heating systems that use electrical resistance to generate heat. A high-performance heat pump system produces about four times more heat than a resistive system for the same energy consumption, as well as offering the comfort of air conditioning during hotter weather.

Ductless wall-mounted heat pumps versus Central heat pump systems

Ductless wall-mounted heat pumps, commonly known as "mini split" heat pumps, do not need air ducts like central systems. The outdoor unit (condenser) and the indoor unit (evaporator) are connected by refrigerant piping and electrical wires that pass through a small 3" opening in the wall.

Ductless wall-mounted heat pumps offer several advantages over central systems:

- They can be controlled individually and adapted to each room where they are located, thereby optimizing comfort while reducing energy consumption.
- They are more efficient because there is no energy loss due to air passing through ducts.
- They are perfect for retrofits where it's impossible or very expensive to install air ducts in existing ceilings and walls.
- They are less expensive to purchase and, because they are more efficient, less expensive to operate.

Single zone versus Multizone

There are two types of applications for wall-mounted heat pumps:

Single zone

A single zone system consists of an outdoor unit connected to an indoor unit. This system is ideal for providing heating and air conditioning to a predefined area, such as an open-concept kitchen/living room or a family room in the basement.

Multizone

A multizone system consists of an outdoor unit that can be connected to multiple indoor units to provide optimal comfort in each room in the house, with independent control of each indoor unit.

Technological performance for enhanced energy efficiency

Unlike traditional, fixed-speed compressors that use a start/stop cycle, the variable-speed rotary compressor (INVERTER) in our units adjusts its speed to the minimum load required to maintain the desired temperature.

Since it always takes more energy to start up a system than to operate it continuously, fixed-speed compressors waste energy and lead to significant temperature fluctuations.

Here are some of the benefits of our INVERTER technology systems:

- Energy savings
- Greater comfort thanks to constant temperatures
- Desired temperature reached more quickly
- Longer system lifespan
- Quieter operation

Heat pump with INVERTER technology versus Heat pump with fixed-speed compressor

Performance ratings

↑ **HSPF** 🔥

↑ **SEER** ❄️

=

↑ \$

Because a heat pump's performance is affected by the outside temperature, we use a heating seasonal performance factor (HSPF) to obtain a more realistic measurement of a heat pump's efficiency over an entire heating season in a given climatic zone. We obtain the HSPF by dividing the total heat output (BTU/hr) of the heat pump over the entire heating season by the total energy used (Wh) over the same period. **The higher the HSPF, the more efficient the heat pump is at heating.**

The equivalent of HSPF for air conditioning is the seasonal energy efficiency ratio (SEER). We calculate this by dividing the total cooling output (BTU/hr) of the unit during the cooling season by the total energy used (Wh) over the same period. Again, **the higher the SEER, the more efficient the heat pump is at cooling.**

And the more efficient the heat pump, the greater your cost savings!

Features

Smart Pan Heater

Prevents ice formation in the base pan of the outdoor unit.

Compressor Blanket and Preheating Technology

Keeps the oil inside the compressor warm and prevents it from mixing with the refrigerant.

Anti-Corrosion Fin Coating

Condenser and evaporator fins are covered with a hydrophilic coating for greater corrosion resistance – a clear advantage for people living in coastal regions.

Quiet Design

The innovative axial fan design and the strengthened motor bracket minimize vibrations and outside noise levels. The integrated rear base and evaporator make our indoor units some of the quietest on the market.

Smart Defrosting

Provides greater comfort and energy savings by eliminating unnecessary defrost cycles.

Smart Preheating

The system delays turning on the fan in heating mode to avoid blowing cold air out at startup.

Auto Restart

In case of power failure, user selection and system parameters are stored in non-volatile memory. The system will automatically return to the last operating mode when power resumes.

Auto-Clean

After the heat pump turns off, the fan continues to operate until the indoor unit is completely dry to prevent mold growth.

Self-Diagnosis

A microcomputer monitors the system and turns the unit off if abnormal operation is encountered. An error code will be displayed on the indoor unit to facilitate maintenance.

Sleep Mode

This function can be used to gradually increase or decrease room temperature, so you can save energy without affecting your sleep.

Turbo Mode

The unit operates at super high speed to achieve quick cooling or heating.

Up & Down Swing

Can be used to select oscillating angles for the horizontal louvres. Choose one of five fixed positions or use the auto swing mode to swing the louvres up and down in the five positions.

Left & Right Swing

Can be used to select oscillating angles for the vertical louvres. Choose one of five fixed positions or use the auto swing mode to swing the louvres left and right in the five positions.

Timer

Allows you to program the time you want the unit to start and stop over a 24-hour period.

I Feel

This function allows you to use the remote control as an ambient sensor.

Lock

This function disables unwanted temperature adjustments and the use of different modes on the device.

Wi-Fi

Use your phone, tablet or computer to control your unit, wherever you are (Internet connection required).

Choose the unit that's right for you

Ouellet Canada offers a variety of heat pumps to meet your requirements. Whether you are looking for a low-cost unit, the most efficient one or something in between, we have the right product for you.

Use the table below to easily compare our heat pumps' features.

To order your Myriad Plus multizone system

OTP-MZ Series

1

Choose the outdoor unit based on the system capacity required.

2

Choose the appropriate indoor unit combination by referring to the opposite combination table.

Refer to the legend to find the product # of the indoor units you want to order.

Example:

Outdoor unit required:
MPD42KCH21SB-O

Indoor unit combination chosen:
09 + 09 + 12 + 12 + 12

Note that each unit is individually packaged.

	-	18 + 18 + 18	12 + 12 + 12 + 12	-
	-	-	12 + 12 + 12 + 18	-

The combinations in red represent the combinations that offer 100% performance of the system in heating mode.

It is important that the sum power of the indoor units does not exceed 133% of the power of the outdoor unit.

Legend for indoor units
